The types D6200N, D6250N and D6300N have been replaced by the types D6200W, D6250W and D6300W. For technical data please check the datasheet D6..W.

Technical data

Functional data	Fluid	Water, water with glycol up to max. 50% vol.
	Fluid temperature	-10...120°C [14...248°F]
	Flow characteristic	0...60% opening angle: equal percentage (VDI/VDE 2173) 0...100% opening angle: S-form
	Leakage rate	tight, leakage rateA (EN 12266-1)
	Angle of rotation	90°
	Pipe connection	Flange according to ISO 7005-2 according to EN 1092-2 PN6/10/16, AS Table E (DN 50...150) PN10/16, AS Table E (DN 350) PN16 (DN 400...600)
	Installation orientation	upright to horizontal (in relation to the spindle)
	Servicing	maintenance-free
	Materials	
	Valve body	EN-GJS-400-15 (GGG 40)

Technical data

Materials	Body finish	polyester powder coated
	Closing element	Stainless steel AISI 304 (1.4301)
	Spindle	Stainless steel AISI 420 (1.4021) (DN 25, 32, 40, 50, 65, 80, 100, 125, 150) Stainless steel AISI 630 (1.4542) (DN 350, 400, 450, 500, 600, 700)
	Spindle seal	EPDM O-ring
	Spindle bearing	RPTFE
	Seat	EPDM

Safety notes

- The valve has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.
- The damper must be opened and closed slowly in order to avoid hydronic shocks in the pipe system.

Product features

- Operating mode** The butterfly valve is opened or closed completely by an open/close rotary actuator. Continuous rotary actuators are connected by a commercially available controller and move the valve to any position desired. The valve disk made of stainless steel is pressed into the soft-sealing EPDM seat by a rotary movement and ensures leakage rate A (tight). The pressure losses are slight in the open position and the Kv value is at a maximum.
- Manual override** Manual throttling or isolation can be carried out with a lever or a worm gear (see «Accessories»).
- With lever (DN 25...150): Adjustable in 10 ratchet steps with position indication (0 = 0° (angle); 9 = 90° (angle))
 - With worm gear (DN 25...700): steplessly adjustable (self-locking) with position indication.

Installation notes

Permissible installation orientation The butterfly valves may be mounted upright to horizontal. The butterfly valves may not be installed in a hanging position i.e. with the spindle pointing downwards.

Water quality requirements The water quality requirements specified in VDI 2035 must be adhered to.

Spindle heater In cold water applications and warm humid ambient air, condensation can be caused in the actuators. This can lead to corrosion in the gear train of the actuator and a breakdown of the actuator. In such applications, the use of a spindle heater is recommended.
The spindle heater must only be activated when the system is in operation because it does not have a temperature controller.

Servicing Butterfly valves and rotary actuators are maintenance-free.
Before any service work on the control element is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level).
The system must not be returned to service until the butterfly valve and the rotary actuator have been reassembled correctly in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.
To avoid a torque increase during off season shut down, exercise the butterfly valve (full open and close) at least once a month.

Flow setting The Belimo butterfly valves have an approximate equal percentage characteristic curve between 0...60% opening angle.

The following table shows the respective Kv values in relation to the opening angle (%).

Differential and close-off pressure

The maximum differential and close-off pressure of butterfly valves depends on diameter and type of the mounted actuator.

To ensure optimum operation and maximum service life, the maximum differential and close-off pressure must not be exceeded.

Please refer to the corresponding table of values in the notes for project planning.
